

**Let's make
the invisible visible!**

World EHS Day

June 16

2025

***World Day of Intolerance
to Electromagnetic Pollution***

On June 16, get informed!

Disturbed sleep, heavy head, migraines, tinnitus, difficulties to concentrate, digestive problems, tachycardia, diffuse malaise...

And if it was the waves?

Learn how to protect yourself from electromagnetic pollution
and how to recognize the symptoms of electrosensitivity
from the associations concerned or
from an electromagnetic diagnostic consultant near you.

**Electrosensitivity affects between 5 and 10% of the world's population,
including thousands of electro-hypersensitive people (EHS)
totally isolated and socially excluded.
Let's not forget them! Let's help them!**
